Color Fill: colours and technology for the decorative finishing of surfaces.

Ceramic tiles, natural stones and mosaics play a central role in interior design and architecture.

Different sizes and material textures allow for spaces and our perception of them to be deeply characterized.

Color Fill is Kerakoll's range of decorative grouts and sealants for contemporary projects. It has been designed to offer multiple colour combinations and technological solutions to meet the aesthetic and performance needs required in the field of surface coverings.

Aesthetics meets performance.

Joints are much more than just a connecting element in discontinuous surfaces. They are “lines” contributing to the space’s design and they enhance style and furnishing choices.

Color Fill is the complete decorative finishing system that redefines the aesthetic and technological function of grouts and

sealants, in line with design and architectural trends.

The formulations developed by Kerakoll offer suitable solutions for a variety of uses.

50 contemporary shades for endless combinations of joints and surfaces.

The Color Fill palette is designed to offer endless possibilities for the finishing of floors and coverings, from tone-on-tone to contrasting combinations.

The 50 elegant and distinctive shades cover a broad spectrum from the most neutral shades to the most intense colours.

Each colour is marked by a code, shared

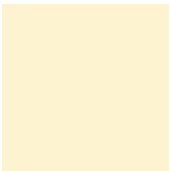

by all products, which allows for continuity and colour balance between surfaces and finishes.

All colours are available for Fugabella Color, Fugalite Color and Silicone Color.

- Available colours for Silmat Color
- Available colours for Neutro Color

The colours are for indicative purposes only.

All products from the Color Fill range.

Grouts

Fugabella Color

Decorative resin-cement for the grouting of ceramic tiles, mosaics and natural stones.

Fugalite Color

Waterproof decorative resin for the grouting and bonding of ceramic tiles, mosaics and natural stones.

Sealants

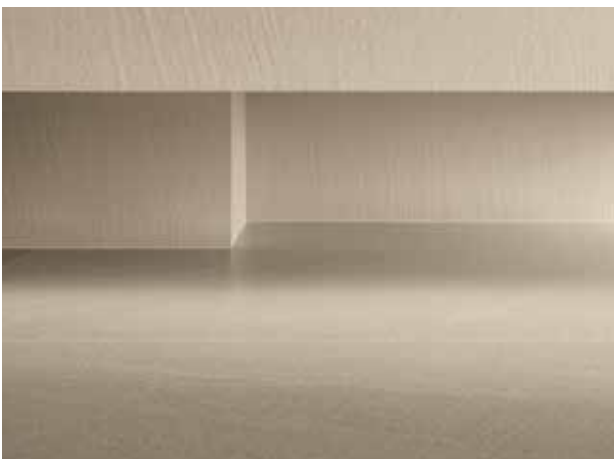

Silicone Color

Decorative sealant for ceramics, mosaics and swimming pools.

Neutro Color

Decorative sealant for marble and natural stone.

Silmat Color

Ultra-matt, elastic decorative sealant.

Options, ideas, applications for every style and need.

Colours and combinations that shape spaces.

Elegantly and distinctively coloured joints in line with the latest trends in interior design and architecture that give rooms dynamism and character.

The resulting combinations highlight details and enhance the uniqueness of living spaces.

The 50 shades of Color Fill effortlessly blend with the most varied shapes and

materials, allowing for aesthetic consistency even in the case of different applications.

Discreet and essential elegance.

The breadth of the Color Fill palette translates into the possibility of bringing different styles to life, from the boldest to the most linear. The 50 contemporary colours of Fugabella Color offer multiple combinations for unique interior design projects. They create a wide chromatic universe, where elegance, freshness and refined taste are expressed to the maximum.

The choice of neutral shades creates visual continuity with ceramic or natural stone slabs, for perfect tone-on-tone combinations.

The resulting minimalist atmosphere lends lightness to volumes and enhances materials.

Long-lasting performance on every surface.

The smooth finish and high chemical and mechanical resistance of Fugalite Color guarantee aesthetic and functional continuity between joints and surfaces.

Thanks to its waterproof characteristics, it is ideal for grouting in environments subject to a high concentration of damp such as bathrooms.

Neutro Color's formulation makes it possible to hermetically seal porous floors and surfaces without damaging materials. Delicate colours match perfectly with marble and natural stones, creating a harmonious and balanced visual effect.

Contrasts that create harmony.

Color Fill intense and distinctive shades allow for contrasting combinations that give character and distinction to every environment.

The high colour stability and resistance to ageing and staining of Fugalite Color make it particularly suitable for grouting kitchen floors and walls as well.

Silicone Color's variety of colours

guarantees a smooth match with the materials and grouts used.

Waterproof, resistant to ageing and chemical substances, it is suitable for sealing surfaces in contact with water and subject to particular wear and tear, such as kitchen countertops.

Visual continuity in a diffused environment.

The natural tones of the joints emphasise the material textures; they contribute to the aesthetic uniformity of the surfaces and the colour balance between the different grouts and sealants used.

Waterproofing and highly resistant, Fugabella Color is the ideal solution for ensuring evenness and long-term colour stability, even outdoors.

Thanks to its waterproof characteristics, Fugalite Color is suitable for grouting surfaces subject to prolonged contact with water, such as tanks and swimming pools.

Respect for the environment and technological innovation.

Kerakoll is a certified B Corp Benefit Company; the award is issued by the international body B Lab to organisations committed to high standards of social and environmental performance.

Among the most appreciated aspects that emerged from B Corp's assessment of Kerakoll were the reduction in the use of chemicals, low emissions of Volatile Organic Compounds (VOC), the eco-design of products and sustainable logistics favouring intermodal transport systems.

Kerakoll products always put the safety of professionals, the respect for the environment, and the well-being of people first.

That is why, within the Kerakoll GreenLab research centre, we are committed to developing ever more advanced and innovative solutions and technologies for the building sector.

The Color Fill range of decorative grouts and sealants respects these principles and combines sustainable quality with the highest performance.

→ **Low emissions of volatile organic compounds (VOC)**

Our decorative grouts comply with the most stringent emission limits set by the GEV-EMICODE® mark and are thus classified as EC1 Plus.

In the manufacture of our products, we seek to minimise the emission of chemical contaminants, thus guaranteeing better indoor air quality, both for application professionals and building occupants.

→ **Transparent communication**

All Color Fill grouts and sealants are analysed via an EPD study - Environmental Product Declaration - which allows us to measure and identify how to improve our products in terms of sustainability.

→ **Long-term durability**

Our decorative grouts and sealants are tested to withstand stresses that replicate the entire life cycle of the product, ensuring durability and reliability and minimising the need for future repair or maintenance.

Fugabella Color

Colour that brings
surfaces to life.

Decorative resin-cement for the finishing of ceramic tiles, mosaic and natural stone.

Resin-cement is the hybrid technology developed by Kerakoll to meet the need to combine performance close to the standards of epoxy grouts with the ease of application of the best cement-based grouts.

Hybrid technology for high quality aesthetic performances.

Resin-cement technology has been designed to ensure colour uniformity and durability. The 50 shades of Fugabella Color feature a fine-grain finish, achieved through the use of pure calcium carbonate, with a calibrated granulometric curve. Kerakoll researchers have developed a formulation free of Portland cement, a substance which, due to the excess of lime that forms during

hardening, results in frequent anti-aesthetic whitening of the joints.

The special pigments used are predominantly of mineral origin and give the colours intensity, brilliance and evenness, making it possible to achieve a variety of shades unattainable with ordinary Portland cement.

Smoothness and resistance for superior technical performance.

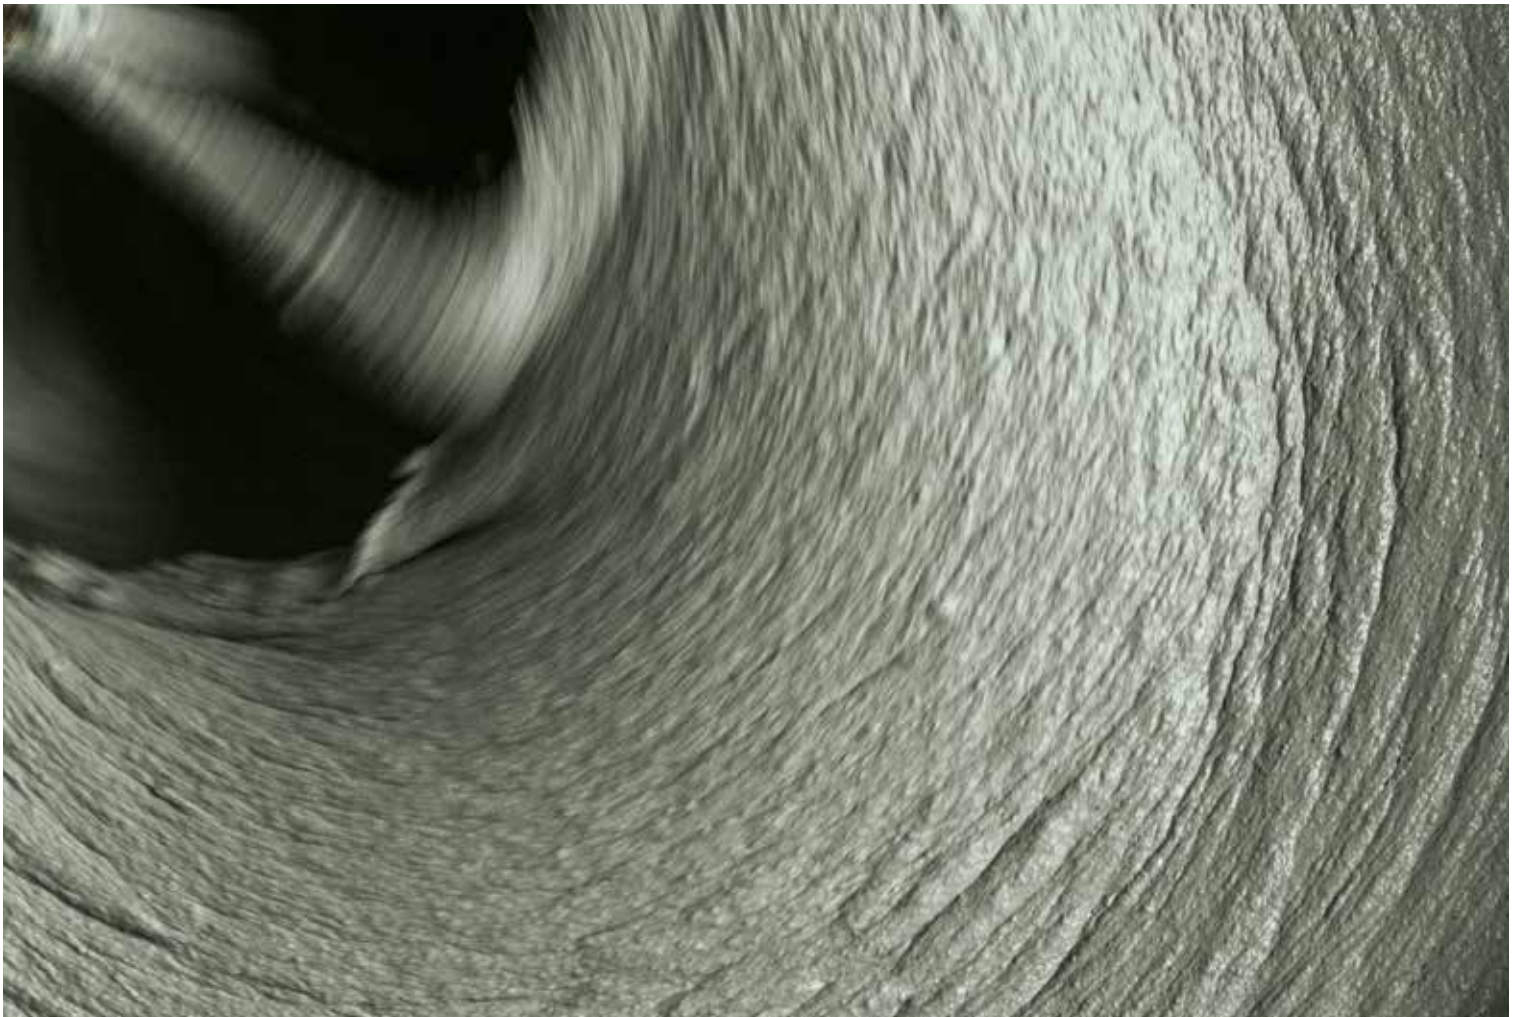

Fugabella Color's hybrid matrix has been developed from selected raw materials. They guarantee low permeability and reduced water absorption, totally eliminate the risk of salt and lime efflorescence and reduce the stainability of joints.

The special binding system combines perfectly with the extremely pure inert portion to give superior resistance to abrasion and total smoothness and long-term colour stability.

Smart technology for extreme ease of application.

Fugabella Color has a soft, plastic consistency that guarantees excellent workability over a wide range of temperatures and environmental conditions. Once the powder is mixed with water, selected additives of natural origin allow the mix to be worked for a long time without difficulty, retaining the appearance of a thixotropic gel.

Thanks to the hybrid resin-cement technology, the mix undergoes a controlled thickening, which facilitates the total filling of the joint and subsequent washing, without causing partial emptying.

Fugabella Color

Decorative resin-cement available in 50 contemporary colours for the grouting of ceramic tiles, mosaic and natural stone.

Fugabella Color achieves performance characteristics such as water-repellence, very low water absorption, high surface hardness, high resistance to the most common acidic substances and total colour uniformity.

- High uniformity and high colour depth
- Water-repellent
- Easy to clean - Easy to clean and maintain
- Superior flexibility
- Prevents the proliferation of bacteria and moulds (ISO 846:2019 Method A/B/C)
- CATAS tested for colour durability in external applications
- Available in 50 colours

Fugalite Color

Unique performance and
style that leave a mark.

Long-lasting performance on discontinuous surfaces.

Fugalite Color is liquid ceramic as it ensures chemical and mechanical resistance performance continuously on any ceramic, mosaic or natural stone surface.

The 50 available shades allow you to obtain infinite combinations for the finishing of floors and coverings, in line with contemporary design trends.

Certified durability in all conditions.

Fugalite Color has waterproof characteristics that make it ideal for use both external and internal use, in any environment, including damp environments and environments subject to heavy traffic and wear.

Colour durability tests were carried out by the CATAS laboratory, a certifying body that analyses and tests the quality of raw

materials and finished products. They certified resistance to ageing caused by sunlight, according to standard ASTM G 155.

Guaranteed application even in the toughest situations.

Fugalite Color guarantees the long-lasting performance and function of ceramic coverings and prevents the growth of microorganisms in the joints.

ISO 846:2019 Method A/B/C tests have confirmed that it is an ideal solution for applications in environments with a high concentration of moisture and favourable to mould and bacteria growth, such as kitchens and bathrooms.

Ideal workability for an easier application.

Kerakoll researchers have developed a formulation that combines the waterproofing and stain resistance of a resin grout with an ease of working and cleaning superior to that of traditional epoxy grouts.

Fugalite Color

Waterproof resin available in 50 contemporary colours for the grouting and bonding of ceramic tiles, mosaics and natural stones.

Fugalite Color is water- and stain-proof, liquid ceramic for joints; it ensures high chemical and mechanical resistance and guarantees the aesthetic and functional continuity of ceramic surfaces.

- Stain proof - Can be cleaned easily
- High uniformity and high colour intensity
- Water-resistant - Non-absorbent and does not change colour
- Prevents the proliferation of bacteria and moulds (ISO 846:2019 Method A/B/C)
- CATAS tested for colour durability in external applications
- Complies with HACCP/EC 852/2004 requirements for food hygiene
- Available in 50 colours

Decorative sealants

Finishes that give value
to living spaces.

Specific solutions for every need.

Kerakoll's range of decorative sealants meet the need for elastic sealing and the necessity to create expansion and perimeter joints perfectly matching the colours of the surfaces and materials used. In aesthetic continuity with grouts and surfaces, they guarantee excellent elasticity, watertightness, adhesion and UV resistance, which are fundamental for

protecting structures and coatings in all conditions.

Each product in the range has been developed to offer technical characteristics compatible with the most common building materials, excellent workability and high colour stability.

Silicone Color

**Decorative sealant
available in 50
contemporary colours
for ceramic tiles, mosaics
and swimming pools.**

Silicone Color develops a high degree of adhesion to non-absorbent surfaces, guaranteeing the integrity and watertightness of ceramic and porcelain coverings subject to deformation.

- Suitable for porcelain tiles, ceramics, low thickness slabs
- Suitable for swimming pools and for permanent contact with water
- Resistant to chemical substances
- Resistant to ageing, UV light and frost
- Suitable for damp environments
- High chromatic stability
- Available in 50 colours

Silicone sealant is available in a transparent, translucent version.

Rating 3

Based on average colour formulations

Neutro Color

**Decorative sealant
available in 12
contemporary colours for
marble and natural stones.**

Neutro Color develops neutral cross-link with no unstable, migrant components. It guarantees a perfect sealing with no streaking or stains on delicate marble and natural stone surfaces.

- Does not attack, yellow or stain marble or natural stones
- Suitable on porous and non-porous substrates
- Suitable for damp environments
- Resistant to ageing, UV light and frost
- Available in 12 colours

Rating 3

Based on average colour formulations

Silmat Color

**Ultra-matt, elastic
decorative sealant
available in 14
contemporary colours.**

Silmat Color develops a high degree of adhesion on porous and non-porous substrates, in all conditions, ensuring integrity and hydraulic tightness of coverings being subject to deformation.

- Suitable for porcelain tiles, ceramics, low thickness slabs
- Suitable for damp environments
- High degree of adhesion
- High elasticity
- Overpaintable
- High chromatic stability
- Resistant to frost
- Opaque finish
- Odourless
- Available in 14 colours
